

CS646-CX-FALL2017-ExtEd
Final Project
Resume Builder

Project Description:

Resume Builder Application which will take all input from user while signing up to application like Professional Summary, Technical Skills, Experience, Competencies, Projects, Education done by that user. When user logs into app he can see his resume in more efficient and accessible format. User can also edit and save his profile information. App also provides a direct button to send email. App will have provision to email recruiter, so pdf version of resume will get attached to the email on click of email button.

How To Run:

Resume Builder App works best for iPhoneX. The application gives better performance on a real mobile device when compared to simulator.

Best Practices to use the application:

Necessary Conditions

- Please make sure the internet connection is on and strong.
- All fields while performing New User Registration are mandatory.
- For setting profile image of user, image should be available in Photos of iPhoneX.
- To run application in simulator, please run "ResumeBuilder.xcworkspace" instead of "ResumeBuilder.xcodeproj"
